

New Classrooms and the Future of Learning

Lecturer: Joel Rose, a co-founder and CEO of New Classrooms Innovation Partners

Abstract

New Classrooms Innovation Partners is a US-based non-profit organization, among the leading voices in the movement toward personalization in education. With funding from the Gates Foundation, Chan Zuckerberg, the Bezos family and others, the organization spent the last six years creating a new learning model for teaching mathematics to students of 10-17 years old. The model integrates live, online, and collaborative learning in ways that provide students with individually suited learning experiences each day. The approach is currently operating in approximately 40 schools across the US. Going forward, New Classrooms is well positioned to use artificial intelligence to further drive students' academic results!
